Epoxy cure Product List

Product Name	Product Use
EC101	Rapid setting, low viscosity, used in many diverse applications
EC122R	Fast curing with good chemical resistance, ideal adhesive and patching applications
EC202	Fast curing with low temperatures
EC401	Fast cures at low temperatures with low viscosity and high modulus. For use in civil engineering applications.
EC413	Ideal choice for chemically resistant 100% solids coatings and general civil engineering applications.
EC422	Moisture insensitivity makes it ideal for casting and laminating applications.
EC423	1,3 BAC version of EC422. Faster cure, better long term color stability.
EC522	Room temperature curing agent for solvent free coatings such as decorative tile grouts and swimming pool coatings.
EC523	1,3 BAC version of EC522. Faster, long color stability.
EC800	Room temperature curing agent for use in a wide variety of civil engineering applications.
EC801	Excellent chemical resistance against general aqueous media. Ideal for conditions where ability to cure under adverse damp conditions.
EC1013	High chemical resistance and toughness.
